

Project Machine Learning

— Milestone 1 —

Konstantin Ausborn, Timon Palm, Marco Rosinus Serrano

November 5, 2024

1 Dataset overview

$$1 + 1 = 3 \tag{1}$$

2 Baseline method and evaluation

- basically just use negative log entropy as the factor to compare
- this describes the entropy of the picture generated? I do not have clarity here see: <https://bjlkeng.io/posts/a-note-on-using-log-likelihood-for-generative-models/>
- I need to understand PixelCNN better to continue
- see Shannon for theory on entropy?
- dont use parzen windows?
-
